Big Ideas—Technology

--Computers are fast and efficient.

--Computers are programmed to perform certain/specified tasks.

--Computers have been made/designed smaller and smaller over time.

--Computers operate by small switches and electronic circuits.

--Computers have several major components.

--Computers have changed over time.

--Computers are vulnerable to hacking and fraud.

--The internet serves as a system of information that is continually updated.

--With technology things are being made faster and less costly.
